

NeckPro Cervical Traction Device

The NeckPro Cervical Traction Device is a patented over door cervical traction therapy device designed for neck traction at home. Simple to use and highly effective, the NeckPro Cervical Traction Device helps alleviate neck strain and/or tightness in muscles of the upper back, shoulders and neck. In addition, the Neck Pro aids in relieving pain associated with cervical disc herniation, cervical radiculopathy, fibromyalgia, Spondylosis, Osteoarthritis, whiplash, scoliosis, and pinched nerves in the upper spine.

Completely assembled and ready to use right out of the box, the NeckPro Cervical Traction Device is not only ideal for at home use, but also great for traveling. The NeckPro Cervical Traction Device uses a precision compression spring along with a patented rope ratchet so users are provided with a more controlled amount of traction; each audible "click" of the ratchet signals an approximate 1 lb. increase in tension. Once desired level of traction has been reached, users can release the rope and relax; once finished, a quick release strap on the halter makes exiting the NeckPro Cervical Traction Device very simple. Users of the NeckPro do not need to worry about water bags or heavy weights. Relieve pain at home when you buy the NeckPro Cervical Traction Device today from ActiveForever.com!
